Member, North County CPA Networking Group, 2012 – present
Member, Christian Business Faculty Association, 2004 – present

COURSES TAUGHT

Principles of Financial Accounting: The theory and practice of accounting applicable to measuring, recording and reporting business transactions for external uses. A study of generally accepted accounting principles with introductions to business ethics, the accounting process, financial statements of corporations, merchandising operations, short-term liquid assets, fixed assets, inventories, current and long-term liabilities, contributed capital, and statement of cash flows.

Principles of Managerial Accounting: A study of management accounting including cost concepts and cost allocation, costing systems, cost behavior analysis, budgeting, performance measurement, short-run decision analysis, pricing decisions, and capital investment analysis.

Managerial Cost Accounting: A study of management cost accounting concepts and procedures with emphasis on development, interpretation, and application of managerial accounting information for planning, control and decision making. This course will include product costing theories and systems, cost-volume-profit relationships, relevant costs for decision making, incremental analysis, pricing and budgeting strategies, and project-control tools in commercial and government cost accounting.

Federal Tax Accounting I - Individuals: A study of the basic Federal income tax laws as they relate primarily to individuals, with emphasis on gross income, deductions, depreciation and cost recovery, gains and losses, passive activity, tax determination, credits, and tax planning.

Federal Tax Accounting II - Business Entities: A study of the basic federal income tax laws as they relate primarily to corporations and partnerships; federal estate and gift taxation; exempt entities; and multi-state taxation issues.
